Hello all

I have documented OfficeAutomation Bazaar package.
It is also improved the SysInfo documentation.

Please check it. I have had problems in the hyperlinks that jump to the right document but not to the function to be highlighted (look at SysInfo document with hyperlinks that should jump to reference).

Best regards
Koldo

A small bugreport. Regretfully text in your big table is almost unseen (too small) even on my 1280x1024.

There are also minor stylistic differences. When creating a reference page you should right click on that topic and select "Apply template style sheet" and choose "Reference".

After all those gray sections like "Constructor detail" you must replace manually the "begin" style with the "end" style. The unofficial section terminator used in a good portion of the docs is "end" paragraph + default paragraph. Default font size is 10.

Good job documenting these packages. It is good to see authors of packages document their creations.

Hello all

Thank you for your review.

Fixes done:

- Tables in SysInfo now are visible. For any reason in the help editor the fonts seem bigger than when help is used.
- I have changed the styles in "gray sections" and font size is 10 everywhere but in titles
- Anyway the hyperlinks work half well: they jump to the right document but not to the function to be highlighted. It can be seen in SysInfo.

Best regards
Koldo
