My app as well as even the IDE does not handle menus (or any popup) correctly when the app is on the second monitor. Here is a poor ASCII drawing illustrating the problem:

```
     | [=== My App ==============]
[ Open ] | [File . Edit . Help     ]
[ Close] | [------------------------]
[ Exit ] | [ App Area              ]
     | [-- Status Bar -----------]
```
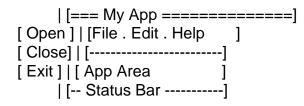

In that example, | is the monitor divide. When I click on the "File" menu when the app is on the right monitor, the menu appears on the far right of the left monitor. It will not appear on the right monitor. This happens with menus as well as DropList's as well as dialogs that may appear.

I am on 2008.1 and Windows Vista.

I think this was fixed a couple of months ago, please try current version.

I'm a bit confused, I thought 2008.1 was the current version? Which file are you suggesting I download?

upp-win32-1254.exe ?

Thanks,

Jeremy

upp-win32-1254.exe ?

Thanks,

Jeremy

I am sorry about confusion, our infrastructure is still a bit lacking.

"officially", current version is 1254. It is way better than 2008.1 (more stable, more features..)

Yes, 1254 is working much better on that front. Thanks!

Mirek

Mirek,

The web page Status and Roadmap is what made me think 2008.1 was the current stable version.
I knew I saw it somewhere but just now stumbled across it again.

Maybe that page should be updated?

The Status & Roadmap page now looks good, however, the latest version is listed as 1154, it should be 1254, no?

Still seems to say 1154.

Jeremy

IIRC the upp site is synced at midnight, so you have to wait for this update.

Still seems to say 1154.

Jeremy

IIRC the upp site is synced at midnight, so you have to wait for this update.

Actually, process starts at 2:00 am (central european time).
