
Subject: GridCtrl: Sorting and Converters

I have code that looks like:

```
hives.AddColumn(APIARY_ID, "Apiary")
    .Edit(apiaryEdit)
    .SetConvert(apiaryEdit);
```

// Later in code

```
void BeekPRO::LoadApiaries()
{
    apiaryEdit.Clear();
    SQL & Select(ID.Of(APIARY), NAME.Of(APIARY))
        .From(APIARY)
        .OrderBy(NAME.Of(APIARY));

    while(SQL.Fetch())
        apiaryEdit.Add(SQL[0], SQL[1]);
}
```

apiaryEdit is a DropGrid. When I sort on the Apiary column in my grid, it seems to sort based on APIARY_ID, not the actual content of the Converter. How can I make it sort on the text displayed, not the id stored?

Jeremy
