I read somewhere that theide supports SVN? I have a project that I checked out from SVN then placed into the MyAppS directory. The context menu on a given file in the project shows an option "Show svn history for file" which works, however, I was wondering if that is all the IDE does? i.e. can I do commits? Check the status of what has changed, etc... ?

Thanks,

Jeremy

I think, based on your other post, that you have already found the answer

Yes, it is able to "Sync", which is automated mix of several actions, which basically puts your source tree in sync with repo.

This is silly but I'm having problems with this again. How do I commit my code from the ide?

Jeremy

How do I commit my code from the ide?

Jeremy

Hi Jeremy,

The syncing options should be in Edit > SVN submenu. Similar options are present in the context menu that appears when you right click on file or package on the left side of the ide:

It should open a window with list of changed files and, most importantly, commit button.

If you don't see these options or the window doesn't appear, it is either problem with you svn installation (but then neither the svn history would work, so it is probably not the case) or it might be a bug.

Maybe you could try the standalone usvn client. It is in uppsrc, just compile it and run in your working copy directory. It is the same code as in the ide, so if there is some problem in the code, it should be broken too and possibly easier to debug.

Best regards,  
Honza

The history works fine. None of the context menus have the SVN menu. From the command shell (cmd.exe) the "svn" command works fine and that's what I've been using for a very long time, but I decided to get back to using the IDE for SVN commits because it is much easier/nicer. I just couldn't find it again.

The gui works fine.

Any thoughts on where to go from here?

Jeremy

Some time ago I run into similar problem, but I was not able to reproduce it... until now The troubles are caused by the design flaw in theide. The syncing options don't show up when at least one of the nests is not svn working copy.

I enclose the patched files form uppsrc/ide, you can try to recompile theide and test it. If Mirek agrees, I'll commit the changes ASAP.

I copied your two source files into my uppsrc/ide directory and the SVN menu now appears. Running the old ide.exe the SVN menu does not appear. So, this did fix my problem at least. Thank you!

Jeremy

Hi Jeremy,

Sorry it takes so long. I don't have the commit rights for usvn directory and Mirek seems to be on holiday or somewhere.

Maybe anyone else from the devs who has the rights?

Honza

This fix is incorrect, reverted.

The problem is that it now lists some folders multiple times.

Mirek

I see the troubles it caused. I'm sorry for the trouble. Also, no matter how hard I try, I am not able to replicate the troubles originally reported by Jeremy

Everything seems to be working even with the patch removed. So, if you run into some troubles, just post again please.

Best regards,  
Honza
