Subject: DropDate in GridCtrl ... Howto populate on insert?
Posted by jeremy_c on Fri, 05 Jun 2009 15:42:54 GMT

I would like to set the date value of the DropDate right before the row is displayed. The situation is I have a GridCtrl of beehive components and when you initially setup a hive, there will be quite a few components inserted of which, they all have the same date. So, the first component installed, the user selects the date. I then want to save that date to a temp variable and when the user presses the Add button on the GridCtrl, I want to populate the DropDate with the saved date.

Thanks for any tips,

Jeremy
