In all the other project works, but in this specific project not. When I open the project TheIDE show me directly the text and I can't see the form designer

TheIDE will not show the designer if there is a syntax error in your text. If there is none, then this might be a bug.

If this is the case, try uploading your file here. Otherwise I don't think that anybody can track down

Ok, thanks! I solved the problem, but the project doesn't give me an error. I deleted the "setinc" value in a double spin button
