hi,
the latest builds don't have mingw.
Is it discontinued?
if so how do I switch to the latest releases?

U++ still works with mingw, might need configuring the build method (depends on mingw version, maybe auto-setup still works).

That said, we are not quite fond of supporting mingw - it is a lot of trouble and Win32 SDK, including compiler, is free. For any serious work, I beg you to install Win32 SDK.

That said ( ) we consider reinstating mingw builds soon.
