Subject: Feature request to support existing projects Posted by janwilmans on Sun, 14 Jun 2009 16:17:15 GMT View Forum Message <> Reply to Message

To import/convert existing projects into Thelde it would be nice to import an entire directory-tree at once.

Now, creating a package for an existing project that contains 10 directories is quite some work.

Also, you must be very careful not to add files to the package that Thelde does not support because (referring to the earlier bug report about png/bmp files) because Thelde will crash an not save the project, so you have to start all over.

Suggested feature:

Import a directory-tree, perhaps specify to import only a certain mask, also add an option to separate the files per-directory.

Something like:

Import: /home/jan/myprogram/head_revision mask: *.cpp, *.h, *.i, *.ico [x] create separators for each directory

Greetings,

Jan

Whoops, I didn't test this feature very well!

I seems that all files are imported into the project as being in the 'root' import directory! the paths aren't used at all.

Also, the order of the imported files seems 'random' they do not seem to be ordered in a logical way, nor sorted.

I think it would be logical to sort by name, and would also keep the 'classes' together in most cases.

Bar.cpp Bar.h Foo.cpp Foo.h

Finally, I vote for a separator for the 'root' import directory as well, as files from the last subdirectory and the 'root' directory are now grouped together.a

All this means:

importdir/fb.cpp importdir/fb.h importdir/foo/bar.h importdir/foo/bar.cpp importdir/foo/br.h importdir/foo/br.cpp

will become:

seporator<foo> br.h br.cpp bar.cpp bar.h fb.h fb.pp

instead of: seporator<foo> foo/bar.cpp foo/bar.h foo/br.cpp foo/br.h seporator<importdir> fb.cpp fb.h

Greetings,

Jan
