hello

I haven't found any documentation about using add/remove flags functionnality of the package organizer.

I think it could be usefull but i can't make it working.

Thanks for your help

This step is able to remove/add compilation flags prior they affect other options. E.g. your setup is GUI MT and for some package (and maybe some When condition, like "LINUX"), you want to remove MT..

Ok thanks mirek but it seems to no work properly.
What is the exact syntax to specify new flags and flags to remove ?

Ha, now observing the code, it seems like it was never really implemented...

Will fix soon.
