I've updated from 2008.1 to 1314 and since i did this, i have a problem when updating a mysql-database:

When i use umlauts in that mysql-update, every umlaut is displayed as ?

Updating a mysql-database using umlauts was no problem with 2008.1.

Is this a known problem and how can i fix this?

Do you have correct encoding mode?

Mirek

I've set encoding in the package-organizer to windows-1252, as i did in the 2008.1 version of upp.

Is this the right place to set the encoding?

The problem seems to be somewhere in SqlUpdate:

```
customer customer;  
  
customer.sqlID = StrInt(sqlData[0]);  
customer.name = sqlData[1];  
customer.number = StrInt(sqlData[2]);  
customer.product = sqlData[3];  
customer.version = sqlData[4];  
customer.location = sqlData[5];  
customer.connection = sqlData[6];  
customer.comment = sqlData[7];
```

PromptOK(customer.name); // Just for debugging

Sql sql(session);

```
sql * SqlUpdate(SqlId(sqlTable))  
(NAME, customer.name)  
(NUMMER, customer.number)  
(PRODUKT, customer.product)  
(VERSION, customer.version)  
(STANDORT, customer.location)  
(ANBINDUNG, customer.connection)  
(BEMERKUNG, customer.comment)  
.Where(ID == customer.sqlID);
```

customer.name contains umlauts as long i update the database with SqlUpdate.

Any idea whats going wrong? As i mentioned before, this problem does not occur using upp 2008.1.

Any idea whats going wrong? As i mentioned before, this problem does not occur using upp 2008.1.

Aehm, and when things get broken?

Anyway, the difference (since 2008.1) seems to be in these lines:

```
if(mysql && mysql_real_connect(mysql, sEmpNull(host), sEmpNull(user),
                                sEmpNull(password), sEmpNull(database), port,
                                sEmpNull(socket), 0)) {
    Sql sql(*this);
    username = sql.Select("substring_index(USER(),'@',1)");
    mysql_set_character_set(mysql, "utf8");
    sql.Execute("SET NAMES 'utf8'");
    sql.Execute("SET CHARACTER SET utf8");
    return true;
}
```

..and then there is code to convert results from UTF-8 to/from actual encoding...

Maybe you could try to set your app to utf-8 and see what happens?

I set my app-encoding to utf-8, but the problem is still there.

(VERSION, customer.version)
(STANDORT, customer.location)
(ANBINDUNG, customer.connection)
(BEMERKUNG, customer.comment)
.Where(ID == customer.sqlID);
```

customer.name contains umlauts as long i update the database with SqlUpdate.

Please, again, when it gets wrong?

Mirek

lets say for exampel the customer.name contains umlauts like this:

```
Sql sql(session);

sql * SqlUpdate(SqlId(sqlTable)) // <-- here the customer.name changes to M?ller
(NAME, customer.name)
(NUMMER, customer.number)
(PRODUKT, customer.product)
(VERSION, customer.version)
(STANDORT, customer.location)
(ANBINDUNG, customer.connection)
(BEMERKUNG, customer.comment)
.Where(ID == customer.sqlID);
```

Sql sql(session);

```
sql * SqlUpdate(SqlId(sqlTable)) // <-- here the customer.name changes to M?ller
(NAME, customer.name)
(NUMMER, customer.number)
(PRODUKT, customer.product)
(VERSION, customer.version)
(STANDORT, customer.location)
(ANBINDUNG, customer.connection)
(BEMERKUNG, customer.comment)
.Where(ID == customer.sqlID);
```

Have you checked what is in MySQL? (using some other tool, e.g. MySql Query Browser)?

Would it be possible to chreate short testcase?

Mirek
