Hi to all,
I notice that Assist++ doesn't work with local variables. Is it a "feature" or I should turn on an option that I haven't found yet?
Or, maybe, is it a bug?

Rick

Ctrl+, (comma) is probably what you are looking for.
I don't like it being split from Ctrl+Space, but at least it usually works.

Exactly. It works. I tought it was a "feature"...
I will comply.
Thanks

7of9
ahem...

It is not a bug, it is just not implemented yet. It is on todo list though. In fact, should not be that

hard to implement.
