Hi,

I downloaded a new version of Ultimate.

The list of function that appear when I press control+g is not complete.

As far as I can see it stops working when it encounters this:

```
struct something
{
```

```
    } varname;
```

It breaks after varname;

It also breaks if there are double ;s

E.g.

```
string inseol = "\n"; ;
```

Aftershock

Thanks, adding to my "Assist bugs database"....

I guess it needs one more last campaign to fix remaining issues...
