This is not really news, because the development started in 2007 (and I was involved for about 6 months), but the product is now final and I guess it looks quite cool:

Really nice looking! The buttons are a little too big. Maybe it's for touch screen. And are those custom window borders or are they just simulated with a control with high Z-order?

Don't suppose you have access to the skin and can make it publically available?

Yes, it is touch-screen app.

Actually, everything is painted by U++, all "windows" are borderless popups. I guess that the window frame you see on screenshots are just because screenshots, normally it occupies the whole screen (OTOH, I have not seen the app for more than 1.5 years

Nope. It is closed-source.

Mirek

Yes it is nice and professional.

Really I see ArrayCtrl and GridCtrl...

Let me propose to have a complete control with the nice looking options of GridCtrl, but with the power of ArrayCtrl like Drag&Drop.

Best regards
Koldo

The interface is very thoughtful and beautiful.
Does the designer on this interface?

You're right. GridCtrl doesn't support currently "new" d&d api. I'm gonna fix this as soon as I finish my current project and docking ide

AFAIK, there were 2 people working on the design, and the one on screenshot is 3rd iteration...
