Open CtrlLib/Ctrl.iml in image editor. Click into image list so that it receives keyboard focus.
Navigate the image list with cursor up/down. There is a text box above the image list which
indicates mouse position. This text box is resized to shorter every time a key is pressed and
resized back to original size when the key is released. Doesn't seem to be a feature

Sorry for not fixing image designer - it will have to be completely redone to support alpha
channel....

Mirek

Don't be sorry Frankly it's not a bug, just a strange behaviour..
Good it will be redone especialy it has tendecy to crash sometimes (very rare, not to repeat..
(mostly when I was doing operations on selections if I remember correctly))
