Subject: It is necessary BLOB field in MySQL

I tried to insert a BLOB field in MySQL database, but GCC wrote on the error. I checked the the MySQL schema file and not found a description of the fields BLOB.

I propose to insert a file MySqlSchema.h the following lines at the beginning.

```
#define BLOB(x)              COLUMN("longblob", String, x, 0, 0)
#define BLOB_(x)             COLUMN_("longblob", String, x, 0, 0)
```

And in the end.

```
#undef BLOB
#undef BLOB_
```

The resulting file in an application. I checked and it works.
