Subject: How to zoom images? [PARTLY SOLVED...] Posted by fudadmin on Mon, 20 Mar 2006 14:25:19 GMT View Forum Message <> Reply to Message

How to zoom images? I've tried img1.RatioSize(Size(10,10)); //no effect img1.FitSize(Size(10,10)); //no effect

and img1.SetSize(Size(10,10)); //not a member of 'Image'?

Actually, current API is going away, I am working on new Image right now (and it will be a simple function).

Anyway, if you need to display zoomed image, the simple way right now is to use the DrawImage with target size. You can also use ImageDraw to draw zoomed image to new one.

Current high quality zooming goes like this (excerpt from the real code):

```
Quote:

PixelArray x = PngEncoder().LoadArray(data).pixel;

Size outsz(min(sz.cx, 4 * x.GetWidth()), min(sz.cy, 4 * x.GetHeight()));

if(w.IsDrawing())

w.DrawImage(Rect(sz), PixelArrayToImage(x));

else {

Size scale = min(outsz, sz << 2);

PixelArray dest(scale);

PixelCopyAntiAlias(dest, scale, x, x.GetSize());

if(w.IsSystem() && !w.IsDrawing())

dest.Paint(w, Rect(sz));

else

w.DrawImage(Rect(sz), PixelArrayToImage(dest));

}
```

(Do you wonder why I insist on refactoring this API?

Do you wonder why I insist on improving Ultimate++ before doing big publicity?

Is there already some progress made towards a simpler resizing of a Drawing to fit a Picture Container?

Im drawing tiny to huge pictures here and like to resize them so they all fit into my 500x500 Container. All those Drawings are quadratic in shape, sounds easy eh?

I am not quite sure what is the problem?

Mirek

i got a drawing which i wish to resize to always fit a canvas. I read from this thread (rather old one thats why im asking) that there is only a rather complex method available using this api, is (was) that the case?

```
"drawing" or "Drawing"?
```

What exactly is "fit a canvas"?

Anyway, for drawing, it is trivial:

Drawing x;

```
void MyWidget::Paint(Draw& w) {
    w.DrawDrawing(GetSize(), x);
```
