Hello,

I installed 1434 (windows 7 RC 64)

and I also installed mingw (TDM 4.4.0.2)

Only one build method: mingw

built with full debug (output mode: full debug is default)

Seems program runs and won't stop at any BP.

I have sparkled these everywhere.

Also run to cursor always "no code at this location"

Also rebuilt from clean, wiped out dir ...

No changes

Also one more piece of info:

debug external seems to work.

Any idea ?

Thanks.

TN.

Never mind.

Seems things get better if i install

Mingw under C:\ instead of C:\Program Files (x86).

Sorry for useless post.

TN.
