This was discussed several times and I think it is a good idea to start using something to track issues. Let us try sf.net first:

https://sourceforge.net/tracker/index.php

Ah finally, I think this is a good idea.

btw. here is the correct link: http://sourceforge.net/tracker/?atid=606223&group_id=939 70

edit:
I think that link should be added to the link bar on this homepage, otherwise nobody will find it

Nice, then we can try this?
But what about google code?

Nice, then we can try this?
But what about google code?

I believe that sf.net version is more feature rich.

I think there is nothing bad using both sites (googlecode and sf.net) and just use what is better.

googlecode seems superior for svn mirror (AFAIK, sf.net cannot be used that way) and automated builds. sf.net for stable builds and now tracker.
