```
#include <CtrlLib/CtrlLib.h>
```

```
struct Item
{
    int i;
    int j;
    Item(int _i, int _j) : i(_i), j(_j) {}
};
```

```
int main()
{
    Item i0(1, 1), i1(2, 2);
    i0.j = 10;
    i1. //DOSN'T WORK
}
```

When Item has only default constructor and in main() there are no brackets next to defined variables assist shows i1's items.

Hopefully fixed (I hope I have not broken something else)

Mirek
