Hi,

actually I use rev. 1472 from svn on debian. A few revisions ago I notice a nice feature in the editor

mark a few lines, press "CTRL + '+'" and the block was marked as comment with /* ... */, press the shortcut again the comments were removed.

actually its not available and I cannot find such a option in the dialog to configure the keyboard shortcuts for the ide.

I really enjoyed it. Is it still available, but with another shortcut? Or did you remove it ...

regards

reinhard

It is Ctrl +[/] on my laptop ...
It would be nice to find a combination for C++ stile comments too.

For it works like this:
I select some text, and then I hit: [{ (" / or * to enclose it in the desired symbol.
(can be configured in Setup / Environment / Editor-tab)

The shortcuts you are using works even when that setting is off?

And the selection+* doesn't work in reversed way, it does add second set of /* */.

ok, that works for me too, but only with linux and when I enabled the option in environment
with windows only "SHIFT + *" works, but it works bidirectional

maybe it was this shortcut and I remember something wrong. I removed ".upp" before I installed
the latest version, so I not need to copy the sources to my homedirectory manually ...

@novo:
you can solve your idea with "abbreviations", just create one with one blank and put the "//" to
what to do with this

whenever you type " ", Ctrl + "." you geht your "//"

@mr_ped:
I didn't remeber, but after this tests I believe I the option was enabled. by the way, it works in both
ways when you mark complete lines, e.g. with "SHIFT + curser down"

Thanks. I figured out how to do that in a simpler way (thanks to mr_ped).

Just select a block of text and then hit [/]. If you selected a line block then this operation is
bidirectional. This is what I missed for a long time.

[*] and Ctrl+[/] work the same way on my laptop.

Ctrl+[/] for some reason doesn't work on my Windows PC at work.

I think these tricks should be listed in an editor's "How To". Probably they already are but I didn't
read it.
