I have noticed that RichText/RichEdit gets quite slow in some cases, especially with long paragraphs.

Over weekend I have added some caching to RichText that completely fixed this issue; however I have had a hard time to get it right, it is quite tricky.

I hope it is fine now (no more crashes and artifacts), but if RichText starts to misbehave in new strange ways, you will know why and you will know you should tell me ASAP...

Mirek

Are these changes included with 1525 build? Are the following related to your changes? (Windows7, TheIDE build 1525)

I believe it is fixed now.

I have launched the builder to upload 1528 version to upp-mirror now. Please check when it is available.

Thanks again,

Mirek
