Hi,

When directly scrolling the selection on the DropList's fixed part using the mouse wheel (or with keyboard arrow keys), the current selection position jumps to wrong item when it crosses a separator which is not the first one in the list. It also allows selection of the separator, which it should not.

```
DropList droplist;
// ...
for(int i=0;i<10;i++){
  droplist.Add(i,Format("%d",i));
  if(((i+1)%3)==0) droplist.AddSeparator();
}
```

To see the problem, try to scroll from 0 to 9 and back.

Thank you for reporting. It was faulty with keyboard Up/Down keys too

Should be fixed now, please check.

Hi Mirek,

Thanks for fixing it. There still appears to be another (related?) problem within the droplist. The arrow keys are not able to cross separators within the actual list.

Thanks and regards,

Tom

Thanks and regards,

Tom

For me, it works in fixed version. Have you tested with fix?

(And yes, I had to fix this too

If there still is a problem, please prepare a testcase.

Mirek

Yes, I tested with the fix.

The initial test case code applies for this one too: Although the wheel and arrow keys both now work on top of the fixed part of the control, the arrow keys can not move the blue list item selection bar on top of the dropped list part when the selection bar encounters a separator.

Mirek,

It works now!

BTW: What is the keyboard shortcut for dropping the dropdown list? (For those among us who hate the mouse...)

Thanks again,

Tom

Alt-Down. Same as in Windows.
