Hello, it's me again

There is the possibility to have the number of the displayed rows? (for example, if I do a resize of my window, a GridCtrl of 30 rows was resized and is possible see only 20 rows)

I need to do an automatic centering when I do a resize. Thanks!

Sam

Unfortunately not. But if you can't wait for my commit to svn just add this method to gridctrl:

```
int GetDisplayedCount() { return lastVisRow - firstVisRow + 1 }
```

Thanks a lot! now, how can I set the center of visualization? I don't have ScrollInto(int) like in arrayctrl.

Thanks again, and sorry for all this questions!

Sam
