Subject: Error when I trying to Add in VectorMap container a "C" struct
Posted by tojocky on Wed, 09 Sep 2009 13:54:36 GMT

Hello all,

Help me please how can I add in VectorMap or in other container a C type struct.

I have the following situation:

extern "C" {
typedef struct C_CLASS {
 ...
} C_CLASS;
}
....
typedef VectorMap<String, C_CLASS > RegistrationMap;
....
RegistrationMap   tempExactMatchMap_;

I have an error becouse the C_CLASS is not moveable.

I read that the C_Class must be moveable. How can I make this moveable?

With respect,
Ion Lupascu (tojocky)

Ion, first of all, you should check if Vector as the right type of flavor for you. May be ArrayMap fits well into your program - it has no Moveable requirement and less side effects than VectorMap.

If VectorMap is required, consider using Moveable:
struct MyType: Moveable<MyType>
{
...
};

Remember that Moveable type shouldn`t contain any pointers.
Additional requirements are listed in the VectorMap help topic.

I read it every night, until I realized the essence of the case.
http://www.ultimatepp.org/srcdoc$Core$Tutorial$en-us.html

I recommend reading it slowly, several times. This is the foundation.

Please do not take offense at the didactic tone. These recommendations from the heart.

Thank you to all!
I found in the help topic:

Alternatively the NTL_MOVEABLE macro can be used to mark types as moveable if the class interface can not be changed, such as in:

NTL_MOVEABLE(std::string);

Thanks to guys who create this macro and write this help!

Now, I working on the cross-os plugin framework. If My tests will be favorable I will share!

The solution is really beautiful.
