Hi, i think it's not possible to hide console because you're not controlling. You may create a gui application without any window and access console with SysExec(it should not show any console) or you may create platform specific solution i.e. services (Windows) or daemons(Linux) depending on what are you doing.

Or you can use the LaunchCommand function in Bazaar/SysInfo package

String LaunchCommand(const char *cmd)
where cmd is just the command line string.

Do you need to get the output of the console program ?

Best regards
Koldo

On Windows:

```
 HWND wnd = GetConsoleWindow();
 if (wnd != NULL)
  ShowWindow(wnd, SW_HIDE);
```
