
Subject: Message when moving mouse over an ArrayCtrl

Hello

I would like to show a help message when moving the mouse over an ArrayCtrl row.

This message text would depend on the row.

This could be similar to the message that appears when moving over a Bar button, or the text in the status bar with `.Help("Message")` also in Bars.

Best regards

Koldo

I guess overriding `MouseMove` and changing `Tip` accordingly to the column/row might work.

Hello Mirek

Thank you for your help.

I have done this test

```
struct ArrayCtrlTip : ArrayCtrl {  
    virtual void MouseMove(Point p, dword d)  
    {  
        int i = GetLineAt(p.y + GetScroll());  
        if(!IsNull(i))  
            Tip(String("You are in row " + i));  
        ArrayCtrl::MouseMove(p, d);  
    }  
    typedef ArrayCtrlTip CLASSNAME;  
};
```

Unfortunately the Tip does not appear.

If I add a Tip with some text when ArrayCtrl setup, the Tip appears but with only fragments of the text.

Any idea ?

Bestt regards
Koldo
