Hello all

I like the GridCtrl Copy and Paste feature. It is very useful.

But I would like to know if it is possible to paste data from for example Calc or Excel to only one column or some of them but not beginning from the first leftmost one.

Best regards
Koldo

Hello unodgs

Do you know if this is possible ?

Best regards
Koldo

What you mean by pasting column exactly?

Hello Uno

I mean, when I paste a column on to a GridCtrl it is pasted in the first column.

Is it possible to paste a column on a selected column different than the first one ?

Best regards
Koldo

I'm still a bit confused . My understanding of this is you have in clipboard all cells for given column stored and then you tries to paste it. If select row mode is not enabled you can start pasting from any row/column you want so there should not be a problem. Could you describe step by step what are you doing and in what mode grid ctrl is?

Hello unodgs

Is there a way to select a column so that it is possible to paste on that column ?

Best regards
Koldo

Hello Uno and Mirek

I would like to use GridCtrl or ArrayCtrl for an application that needs to select rows, columns or groups of cells like in an spreadsheet as in Excel or OpenOffice.

Do you know if it is possible to do it ?

Best regards
Koldo

In GridCtrl you can switch to cellmode:

```
grid.SelectRow(false);  
geid.EditCell();
```

You can make rectangular selection then with ctrl key.

```
grid.SelectRow(false);  
geid.EditCell();
```

You can make rectangular selection then with ctrl key.

Hello Uno

Thank you for your response. I have applied but I get this:

Row selection works well but column selection does the same (selections goes to the rightmost column and comes to the leftmost).

However copy and paste works well. Pasting a rectangular selection from Excel is done perfectly.

Best regards
Koldo

I forgot to tell you need to enable multi selecting. Probably `grid.Multiselect()` - I don't remember exactly

Hello Uno

Yes. Now it is possible to select rectangles

Just a little bit more. Is it possible to select a row (by clicking on the header) or a column (by clicking on the indicator) ?

Best regards
Koldo

Not at the moment, but that's easy to implement. I'll try to add it.

Thank you!

Koldo

P.D.: Next in italics as I feel I am asking too much

Just to ask a little bit more... Now to select a rectangle it is necessary to click previously Ctrl key (no problem), but if, without releasing the Ctrl key, I change the selection with the mouse, the selection is changed, I mean:

1. Ctrl click
2. Mouse click of the left, top rectangle vertex. Ctrl remains clicked.
3. Mouse click of the right, bottom vertex. Ctrl remains clicked.
4. Mouse clicked again. Ctrl remains clicked. GridCtrl considers the 3. as the left, top rectangle

vertex and 4. as the right, bottom vertex, instead of considering 2. the left, top and 4. the right, bottom, as Ctrl click has not been released yet

What do you think ?
