maybe i'm an idiot but i thing i know the reason of UPP low popularity:

maybe i'm an idiot but for two hours im looking how make array control editable - (eg goEditing in builder)

looking reading and nothing

i use:

```
teren.lista.SetEditable();
```

and

```
teren.lista.AddColumn("x1",1).Edit(es1);
```

and testing very very other ideas

and NOTHING

maybe i'm an idiot but there is more idiots on the world
why we can't use UPP???

help my with this problem please ...

ps in my first step by builder i spend 10 seconds to find go editin options - it is very important for begginers to not losing time ...

Yes, life is difficult here... You have to look at the sources. It took me 10 min this time... Not perfect, but maybe as a starting point for you.

```
#include <CtrlLib/CtrlLib.h>
```

```
class App : public TopWindow {  
    ArrayCtrl array;  
    EditField arr_edit;  
public:  
    typedef App CLASSNAME;  
    void ArrayEdit();  
    App();  
};
```

```

void App::ArrayEdit() {
    array.ColumnAt(0).Edit(arr_edit);
}

App::App() {
    Add(array.SizePos());

    array.AddColumnAt(0,"Column0",50);
    array.AddColumnAt(1,"Column1",50);

    array.Add("1textfor0","1textfor1");
    array.Add("2textfor0","2textfor1");

    array.WhenLeftDouble = THISBACK(ArrayEdit); //double click to edit

    Sizeable().Zoomable();
    Title("ArrayEdit");
}

GUI_APP_MAIN
{
    App().Run();
}

```

THANK YOU FOR HELP!!!

but when i tray to use it i have another problem:

i tray it that way:

```

teren.lista.ColumnAt(teren.lista.GetClickColumn()).Edit(arr_edit);

```

1. it working but only one time - when i change data and pres enter and then clicking another cell it wons to edit cell i clicked first time ...
2. when i change data and not press enter and then click another cell i see nothng in first cell ... after that i can nothing to do with it ...

3. the same is when i click some cell eg. 4 times

4. sometimes when i'm closing application i crashes with information:

assertion failed dynamic_cast<const RichValueRep *>(p)

help my again ?

i tray it that way:

```
teren.lista.ColumnAt(teren.lista.GetClickColumn()).Edit(arr_ edit);
```

1. it working but only one time - when i change data and pres enter and then clicking another cell it wonts to edit cell i clicked first time ...

2. when i change data and not press enter and then click another cell i see nothng in first cell ... after that i can nothing to do with it ...

3. the same is when i click some cell eg. 4 times

4. sometimes when i'm closing application i crashes with information:

assertion failed dynamic_cast<const RichValueRep *>(p)

help my again ?

For people willing to help is easier just to copy and test your piece than imagine how it must work. Please post the whole code here.

Quote:

```
class robot : public WithrobotLayout<TopWindow> {  
public:
```

```
.....  
    EditDouble x1, y1, x2, y2;
```

```
.....  
};
```

```
robot::robot()  
{
```

```
.....  
    teren.lista.AddColumn("x1",0).Edit(x1);  
    teren.lista.AddColumn("y1",0).Edit(y1);  
    teren.lista.AddColumn("x2",0).Edit(x2);  
    teren.lista.AddColumn("y2",0).Edit(y2);  
    teren.lista.Appending().Removing();
```

```
.....  
}
```

...I am not sure whether Appending/Removing applies here...

(ArrayEdit is not needed here).

You can also get "direct" editing (with Ctrl's always visible) by

```
teren.lista.AddColumn("x1",0).Ctrls<EditDouble>();
```

OK, something I should have done a long time ago, a good reference examples demonstrating different ways of editing cells in ArrayCtrl:

```

#include <CtrlLib/CtrlLib.h>

#define LAYOUTFILE <ArrayCtrlEdits/ArrayCtrlEdits.lay>
#include <CtrlCore/lay.h>

struct App : public WithAppLayout<TopWindow> {
    EditDouble editdbl;

    typedef App CLASSNAME;
    App();
};

struct SqrNumberConvert : Convert {
    virtual Value Format(const Value& q) const {
        return IsNull(q) ? (double)Null : (double)q * (double)q;
    }
};

void EditDbMinMaxFactory(One<Ctrl>& ctrl)
{
    ctrl.Create<EditDouble>().MinMax(0, 1);
}

App::App()
{
    CtrlLayout(*this);
    list.AddColumn("Number").Edit(editdbl);
    list.AddColumnAt(0, "Number^2").SetConvert(Single<SqrNumberConvert>());
    list.AddColumn("Text").Ctrls<EditString>();
    list.AddColumn("Limited number").Ctrls(EditDbMinMaxFactory);
    list.AddCtrl(editor);
    list.AddCtrl(option);
    list.Appending().Removing();
    list.SetLineCy(EditField::GetStdHeight());
    list.ColumnWidths("49 63 74 96");
}

GUI_APP_MAIN
{
    App().Run();
}

ArrayCtrlEdits.lay:

LAYOUT(AppLayout, 416, 132)
ITEM(ArrayCtrl, list, LeftPosZ(4, 300).TopPosZ(4, 124))
ITEM(EditInt, editor, LeftPosZ(308, 104).TopPosZ(4, 19))

```

```
ITEM(Option, option, SetLabel(t_("Option")).LeftPosZ(308, 104).TopPosZ(28, 15))  
END_LAYOUT
```

thanks awfully!

```
teren.lista.AddColumn("x1",0).Ctrls<EditDouble>();
```

it is that what i need

i tray this metod before im writting:

```
teren.lista.AddColumn("x1",0).Edit(x1);
```

but i use:

```
EditString x1; (i find something like that on forum)
```

and it was my mistake... but now evrything works ok THANK YOU again

I wont to say something about UPP popularity:

In my opinion UPP worth to by farmous all over the world and should be used by many many people - there is a lot wonderful thigs in it (eg. containers, serialize mechanism etc..)

but there is colossal work to do - it must be more intuitional (simple to use) by people who are using delphi builder etc.
especially in "using widget" aspect builder is more more confortable to use ...

if that work won't be made that people will be discourage
fast ... it's a pity!

more people, more links, more aplications, more ideas ...
remember that all beginners are potential expert in future - so dont forget about as

upp worth it !!!

sory my english
Yours faithfulty
Bartek

ps if is there any person who wonts to make polish version of upp site (i'm to stiupid to do it alone), i can give good, unlimited hosting and help (in my possibility)

but there is colossal work to do - it must be more intuitional (simple to use) by people who are using delphi builder etc.

if it won't that people will be discourage
fast ... it's a pity!

more people, more links, more aplications, more ideas ...

Yes. OTOH, we need to gather resources for that colossal work now - it mostly involves creating experienced U++ programmers via forum tutoring that will spread the U++ fame, bring more people to use it , find bugs, write tutorials and start the chain reaction...

U++ was and IS developed as tool to solve the problem. We (I mean original U++ developers) always cared more about experienced programmers and daily use for developing of very complex apps than about C++ beginners. We are trying to make it more accessible, but there is limited amount of time we can dedicate on that...
