hi folks

i read
http://www.ultimatepp.org/forum/index.php?t=tree&th=1829 &

where i interprete that compiling with MSC to a DLL used to produce an automatic .def file, and thus during link a .lib file.

in current releases i cant see this work anymore..

how to do that?

PS: this is related to my other post on HOWTO compile simple dll and an application, using theide, because there is still no good info on that in docs or forum.
