```
#define MY_TITLE "Slider verticality bug?"
```

```
#include <CtrlLib/CtrlLib.h>
```

```
struct App : TopWindow {  
    SliderCtrl    slider;  
    ProgressIndicator progress;
```

```
typedef App CLASSNAME;
```

```
App() {
```

```
    Add(progress);  
    // progress.SizePos();  
    progress.SetRect(50,50, 15, 300);
```

```
    Add(slider);  
    // slider.SizePos();  
    slider.SetRect(100, 50, 15, 300);
```

```
    slider<<=50;  
    Sizeable().Zoomable();  
};
```

```
GUI_APP_MAIN
```

```
{  
    App().Title(MY_TITLE).Run();  
}
```

In this code slider and progress sizing are identical. And height>width. So, they both must be vertical. A bug or underdevelopment?
