hi there, i was playing around, with the wish to have a ParentCtrl, to which i can add things and which is able to have scrolling. from some other posts i got the point from mirek, to use a pane ctrl containing all the controls and another control that can "spot" into that pane at a position and size, determined by user and the scrollbars.

just take a look on the attached project, maybe you will find it usefull. its done as a template. so you can also use other controls as pane..not only ParentCtrl

i'd be glad if this could be extended to fit Upp standards and maybe integrated into the bazaar

with some more testing got to know some recursion bug when upper class uses Layout and stuff, to disable scrolling things, so here comes a bugfix, what still needs to be done is, enable the functioning and disabling, while enabling restores some previous settings. is to come up later
