Hello all

Is it possible to link the enter key to a CallBack in EditString ?.

The trick I have used is to derive a new class from EditString and get the enter key catching EditField::Key(). It works but I wanted to know if there is a more direct way.

Best regards
Koldo

No. But you might consider catching K_ENTER in your main window ::Key.

Hello Mirek

Quote:No. But you might consider catching K_ENTER in your main window ::Key.

I prefer to get ::Key in the control so that it has an autonomous behavior but anyway thanks

Best regards
Koldo
