Hello all

I wanted to have an Splitter with transparent background.  
The Splitter is child of a StaticRect.

So in the parent constructor:

```
Parent::Parent() {  
    splitter.Transparent();  
    Background(Null);  
}
```

The splitter looks transparent, but when resizing the splitter middle frame, the splitter gets black:

Do you know how to solve it ?

Best regards  
Koldo

It might be U++ bug. Can you create a simple testcase please?

Hello all

It is solved.

The trick is to follow these rules:

- To define a StaticRect as transparent it is needed to do both:

```
Transparent();  
Background(Null);
```

- To define a Splitter as transparent it is needed to do this:

```
Transparent();
```

Following these rules it is possible to stack some transparent Splitter and StaticRect.

Best regards  
Koldo
