If I exit by just closing the selection dialog, the XmlView example crashes in b1824 on Windows Debug build, VS9.

I think what is happening is the call to StoreToFile is with a null pointer for file in Stream.cpp.

If I add the test below, it doesn't crash.

```
bool StoreToFile(Callback1<Stream&> serialize, const char *file, int version) {
    FileOut f(Cfgname(file));
    if (!file) return false;
    return f ? Store(serialize, f, version) : false;
}
```

Thanks, bug was in Serialize, files cannot be serialized this way - need to call SerializeSettings instead:

```
void XmlView::Serialize(Stream& s)
{
    int version = 0;
    s / version;
    SerializePlacement(s);
    files.SerializeSettings(s);
    s % dir;
    s % splitter;
}
```
