Subject: parsing bugs in the IDE

Hi,
The current parser does not seem to find formal arguments of a procedure
If I use ctrl+g, it does not come up in the list, and it does not come up in code completion either.

E.g. string compactcommandline(string defaultcommandline,string commandline)
 {
defaultcommandline will not be found.
Good Luck!

Is it std::string or U++ string?

TheIDE at this moment is unable to parse external headers, because they tend to be loaded with
macros.

It is std::string.

This seems to be different problem.. see this:

int compactcommandline(int asas)
{

as // if you try to autocomplete as it will not offer asas.
int i,j;
}

```

Ah, that is a feature, albeit poor one (I guess it will need to be improved): Local variables are not suggested.
