Hi,
string compactcommandline(string defaultcommandline,string commandline)
{
 vector<string> cl= splitcommandlinestr(commandline);
 vector<string> dcl= splitcommandlinestr(defaultcommandline);
 hash_map<string,string> clpairs,dclpairs;

int i,j;
}

This breaks the parser because of int i,j line.
No function will be visible after this line.

All the time the same issue. Parser does not understand the external headers - yet.

It must be a different problem because this causes the same thing:
int compactcommandline()
/**/{

int i,j;
}

Not in my theide. I have just tried this:

#include <Core/Core.h>

```
using namespace Upp;

int compactcommandline()
/**/{

int i,j;
}

void MyTest() {}

CONSOLE_APP_MAIN
{
 MyTes(*)
}
```

(*) marks the place where I pushed Ctrl+Space. Everything seem OK.

What is your U++ version and OS?

That is quite outdated. Anyway, can you try exactly my example?

I tried.

It is ok yet a similar example does not work inside the code.
