<https://wiki.ubuntu.com/Quickly>

From a 30seconds long look I would say it should be possible to create U++ template for Quickly too.

I think we should consider this, it may give U++ further exposure, and while using templates inside U++ IDE is easy, they will not help you with app release into Ubuntu's PPA (personal repository globally available and maintained by Ubuntu team).

So I still think creating such template would make sense even from practical point of view, not just for PR reasons and exposure.

Hi Ped!

I gave it 20min look and it still looks interesting It might be a nice helper for beginners (upp beginners as well as total beginners). It seems to offer quite a big freedom in what can the template do. I guess we might "teach" it to use existing theide templates and edit code+layouts+iml files in the ide for a start.

Actually I'm more interested to see how the packaging and releasing in ubuntu-project works. Maybe we can get bit inspired there

About the PR impact: To actually expose upp, we would have to push our template to official package, or at least get listed on related web pages. If we can get it that far, it might lure some fresh users

Best regards,
Honza

That's what I had on mind.

I don't think I will have enough time to try by myself, but if anyone is bored and looking around for

something interesting to do, I think this has plenty of potential.

I'm preparing for my exams, so I'm bored more than enough Unfortunately I still have enough willpower to study instead of coding... If nobody starts before me, I'll definitely dig into this more deeply in March or so...
