Hmm, uppbox generates examples-page using the packages, so I can't change examples' info (any thoughts how to deal with that?). Well, I've translated what I can (including HelloWorld example).

Best regards and sorry for my English.
Anton.

Hello Sc0rch

The subject is not to translate pages, it is to insert new pages that are translations of older and are linked to them and to main web hyperlink web in a nice way.

One example is in new Bazaar page. Read the documentation and tell me what do you think.

Best regards
Koldo

Hello Koldo,

As I'm doing now, =) This evening, I'll try upload ru-pages to SVN with help of someone. P.S. Just inserting translated pages, not overwriting.
koldo wrote on Tue, 26 January 2010 03:56

Posted by koldo on Thu, 28 Jan 2010 02:05:54 GMT

Hey

A web page in Russian !

http://www.ultimatepp.org/www$uppweb$overview$ru-ru.html

Do not you think that we may do it in more languages ?

(Why not in your language)

Perhaps not all the documentation, but at least the:

- Index (home page)
- Overview
- Comparisons
- Download

---

and of course
- Funding

Best regards
Koldo

I have tried to provide such a way that not only the Russian translation could be placed on the site.

The work of translation is not fast. We work together with Anton (sc0rch). We will translate all the articles gradually.

I hope the representatives of other languages is also willing to do the translation.

I do not know how to other countries, but Russia's situation is that the lack of translation is a serious barrier to start using the tool.

Hi Ion.
Yes we did so.

Just write the original texts are not in simple english. When just reading the documentation, it does not require the literal sense. And when the translation, I want to extinct as possible.

Hello Sergey

Do you remember I told in other post that uppweb has "en-us" hardcoded everywhere ?.

Well, this is one place.

In addition uppweb does not try to take hyperlinks from Examples pages, so the [en][ru] links are lost.

If nobody can do it in one week I would internationalize a little bit uppweb .cpp code.

Hello everyone! Thanks for the answers!

I think, it would be ideal if the user could click the "RU" at top of page, go to the main Russian page, save it to his bookmarks and forget about switching the language.

Also, if the article is not translated yet, the English version of the article can be displayed.

What do you think?

Just my thoughts. Sorry, if something wrong. Best regards!
Anton.

P.S. I have translated Index-page, looking for another...

Hello Sergei

Please check file index$en-us.tppi.

To be sure I have:
- Deleted uppweb and downloaded from svn
- Checked the file in upp-mirror

This is the beginning:
TITLE("Ultimate++ is a C++ cross-platform rapid application development framework")
COMPRESSED
<<<<<<< .mine
120,156,172,

This is the end:
>>>>>>> .r2061

The symbols >>>>>>> and <<<<<<< are not part of the file and seem to be added by svn.

If you delete them the package compiles and runs.

Posted by sergeynikitin on Fri, 12 Feb 2010 15:30:20 GMT

Hi Koldo!

If there are doubts about modifying the home page, it can be brought up for discussion, or, in the end, nothing prevents us tomorrow or next week to return to the previous version.

My pros and cons:

- I hope that we can change the functional uppweb so that text typed script for more than 24 points in the HTML output would fall as the tag <H1>, and then these titles help us very much in search engine optimization.

- Is the repetition of key words typed with a different style.

Certainly it seems to me quite right to alter design of the main page and include plenty of keywords to go there and remove it from the list of files to download, because, again, for search engine optimization, the main holder of the keywords the site is the home page.

I'd like (for search engine optimization is extremely important) to be able to links and images to include the tag TITLE, which shows a balloon, but the text of the tips is several times more weight than plain text for search engines.

Frankly, my opinion is that it is much hyped, so that consulting companies can sell more...

Mirek

Subject: Re: Ultimate++ Homepage Translations (RU...)
Posted by mirek on Fri, 12 Feb 2010 16:14:21 GMT

I thing that title is perhaps OK, but I would not repeat the first sentence there..

However, the index page is more than 3 years old now (I believe), maybe we rather should take this oportunity to make some overhaul of the text?

I suggest putting some screenshot back (I have removed it by me SEO consultant advice.. and perhaps make the screen more active, like giving directions (at least something "I am newbie" link

---

or similar).

Suggestions welcome.

Hello all

Now Upp web is a little bit more international.

Could you find something different ?

Now uppweb has a .t file with supported languages.

If you want to add a new one:

- include the new language and the messages in .t

- go to www.cpp and add your language here:

```
 languages.Add(LNG_('E','N','U','S'));
 languages.Add(LNG_('R','U','R','U'));
```

There is a small problem with the translation Funding Ultimate++. In Russia, limited use of PayPal (perhaps not only in Russia).

Perhaps there are similar international instruments?

In Russia (and in post soviet countries) very common WebMoney (http://www.webmoney.ru/ or english link http://www.wmtransfer.com/).

Subject: Re: Ultimate++ Homepage Translations (RU...)

Could you find something different ?
Menu looks great! Thank you for help, Koldo.

About PayPal: Funding must be easier for users, more universal, have alternative ways of payment. Maybe, WebMoney is a good alternative.

Best regards,
Anton

Subject: Re: Ultimate++ Homepage Translations (RU...)
Posted by koldo on Mon, 15 Feb 2010 20:32:14 GMT

Hello all

Now translation links are in right side.

As they are part of the T++ page, they have to be written and linked between them every time a page is done. Also in Forum these links are lost.

I propose some new locations labelled 1, 2 or 3.

These locations would be done automatically by uppweb so no language link would have to be

included in T++.

What do you think ?. What location do you prefer ?

```

sergeynikitin wrote on Mon, 15 February 2010 23:35Perhaps we put the notation language together with the flag?
Please, no flags!
I know "a picture is worth a thousand words" but not in this case. Flags sometimes make sense for that country habitants but not for others. I would like to be able to know which is Russian translation without having to know it's flag. Languages abbreviations makes more sense than country flag, in fact we are talking about languages not countries so flags doesn't fit in language context. I don't see any correlation between language and flag.

Hello ScOrch

Now I have realized of this:

Quote:P.S. Oops, you mean "Examples", not "Manual".
http://www.ultimatepp.org/www$uppweb$examples$ru-ru.html - there I found them. Yes, English page is broken.

This has been caused because on Sunday I tested offline (of course) the changes. However at the same time the Examples page translated to Russian was uploaded.

The problem is that as web Examples code has not been modified (internationalized) yet, it has taken the first Examples available option, that has been the Russian one

Today I will retry to modify Examples code. If I cannot end it, I momentary remove the Examples Russian translation and Examples web will work in English properly.

Hi,
Wikipedia example is more usable, we don't have to scroll down to the bottom of page to change translation. If we implement that then [en][ru] links from translated pages should be removed if we have language selector "a la" wikipedia.

Andrei

Subject: Re: Ultimate++ Homepage Translations (RU...)
Posted by sergeynikitin on Wed, 17 Feb 2010 15:07:27 GMT

It would be good if there is no Russian articles, would automatically display the English version, and at the same site should not be completely switched to English. I do not know how to do this, maybe copied to Russian English text of article until will not be ready to translate into Russian.

sergeynikitin wrote on Wed, 17 February 2010 16:07It would be good if there is no Russian articles, would automatically display the English version, and at the same site should not be completely switched to English. I do not know how to do this, maybe copied to Russian English text of article until will not be ready to translate into Russian.
Hello Sergey

That could be a brute force but effective solution.

Now every web page is an .html so left buttons are solidly fitted to central page contents.

You can do dynamic effects in static html using javascript. But again, it is bad for SEO Another solution would be to use modrewrite on server to redirect nonexistent files to their english equivalent, but that would probably require using separate directory for each language in order to keep the language info. So Sergeys brute force solution is IMO the only solution that can be used right away

Hello, Koldo!

English page of Examples is still broken. Sorry, if you are already know about it.

Best regards,

Anton

Hello Sc0rch

The web infrastructure run once per day so we will have to wait until tomorrow to see the changes.

Hello all

I think problems are fixed online.

Thank you for your patience

Now also Examples/References pages can be translated and thus Russian translations are used.

Thanks to Mirek's good job it is not difficult to change web behavior.

And after analyzing the causes of the problems you reported these week now I understand better how it works.

Hello all!

Some pages translated. Screenshots (main and chameleon), Comparison with Qt, Applications. Added to SVN.

Please, check them. Sorry, if something done wrong.

Best regards,
Anton

Dear friend!
How to switch to Russian on page like this:
http://www.ultimatepp.org/www$uppweb$overview$en-us.html ?

(I can't find how to switch)

Please return some language switch to any part of page.

Please return some language switch to any part of page.

Hello Sergey

Thank you for your comment. It was my fault in last change.

I will commit the fix today.

I propose to change mechanism of describe bazaar packages (and example packages).

I tried to translate the page Bazar and faced with a challenge: List of packages rather variable.

I propose following solution.
If someone experienced - The description of the Linux applications are stored in files ".desktop"

Here is a small piece of this file:

```
[Desktop Entry]
Encoding=UTF-8
Name=gitg
Name[da]=gitg
Name[es]=gitg
Name[fr]=gitg
Name[gl]=gitg
Name[nl]=gitg
Name[pa]=gitg
Name[sv]=gitg
Comment=Git repository browser
Comment[da]=Arkivbrowseren Git
Comment[es]=Examinador de repositorios Git
Comment[fr]=Butineur de dépôt Git
Comment[gl]=Examinador de repositorios Git
Comment[nl]=Git repository bekijker
Exec=gitg %U
TryExec=gitg
Terminal=false
Type=Application
Icon=gitg48x48.png
Categories=GNOME;GTK;Development;RevisionControl;
#X-GNOME-DocPath=gitg/gitg.xml
```

As you can see, and the package name and description - multilingual.

I also propose to modify the format of the package definition - file package-name.upp format using the same idea.

And then the list of packages Bazaar can also be automated (as Examples) and the list can keep always up to date regardless of the chosen language.

Hello Sergey

I think it is a great idea.

A possible shortcut is to consider an .upp file someway similar to a .lay regarding to internacionalization.

I mean, the message in .upp could be sent to the .t file when "Synchronize translation files".

sergeynikitin wrote on Thu, 24 June 2010 07:49I also propose to modify the format of the package definition - file package-name.upp format using the same idea.

Hi Sergey,
It seems like an interesting idea. I think the description field in .upp files could be modified to store language specific strings. Application name is the same as the package directory name, so it would be a bit more complex and it is also not that important, but still possible.

BUT... The main problem I see wit this proposal is the translation. No author knows all the languages, so he can't translate those descriptions by himself. A translator for given language could do that, but than he would have to have access to all the bazaar packages. Another option would be to submit each translated description to the package author separately, which would be tedious...

Honza

EDIT: I agree with Koldo, his solution is much better, I didn't see it before I sent my post One global .t file for bazaar packages located in uppweb would solve all the trouble.

I think it would be then ok to give everyone permissions to change .upp files, just like we can change .tpp now.

Or maybe add some .uppt where only translation strings would be stored. (although generally I don't like clutter of project directories with obscure automated files (hey "init", did you hear me?))
