Hello,
I think we have to make some rules and suggestions that anyone should follow in order to contribute to U++ and make life easier for others.

Rules:

 add comments to your commits
 put "YourPackageName:" in your commit comment and/or assembly to which it belong
 don't commit to many features at once, separate them if they do different things

Suggestions:

 post examples or test-cases in *.zip format, it's wide accepted and perhaps "de facto" archive format
 remove from your posts any archive or file that have a new replacement in your new post (you help keeping storage space usage low)
 search before asking something, there may exists the same question with same answer

I think it should necessarily be placed on the page bazaar, created by Koldo in the new version.

Hello Sergey

New Bazaar is ready to be published in web. You can check it in uppweb package.

I have included your comments and I hope they will be published tomorrow.

I hope you like it

Best regards
Koldo

Another question, I asked it already in other forum branch.

How realistic do on site www.ultimatepp.org Russian menu on the left, if the person switched to the Russian language in the articles?

How realistic do on site www.ultimatepp.org Russian menu on the left, if the person switched to the Russian language in the articles?

Good question

Now two important things are hardcoded in uppweb source:
- Left menu text strings and links: check variable "bi"
- en-us extension. It is everywhere in the program

This means uppweb source has to be changed to have Russian left menu.

This is not very difficult, but it would require some hours from somebody .

Best regards
Koldo

Hi Koldo,

I've seen your new bazaar page, very nice
I guess I forgot to put my name on following packages :

RasterCtrl
Signals

And I made an addition to filetabs/tabbar stuff, a TabCtrl, it's there, still undocumented anyways

Ciao

Max

p.s.: I've seen that in PolyXml help page there's just WithFactory class documented, it miss the PolyXml class itself. I guess it's because of some mistakes I made documenting it... or not ?

Max

I have one more to add to the list:

- If you are posting a patch, please make sure you have your real name in the personal information. It would save me (or anybody else applying the path) one PM message as we want to have all contributors listed in Authors & License.

Koldo

I propose use .t file for translations of site elements.

Sad

Done

Quote:p.s.: I've seen that in PolyXml help page there's just WithFactory class documented, it miss
the PolyXml class itself. I guess it's because of some mistakes I made documenting it... or not ?

See tomorrow new point 3.4 in page
http://www.ultimatepp.org/www$uppweb$bazaar_submission$en-us .html.

In summary the best is to have one Summary page and link from them all T++ pages. This
Summary will be linked from Bazaar Summary. As you have two different pages I chose one.

Anyway you will see (and it is documented) that you can do it for yourself

Best regards
Koldo
