IMHO, the authors of U++ should spend a little time on writing a comprehensive tutorial on U++. This would make people easily and quickly be familiar with it.

I agree. There are a few tutorials but they're not quite easy to find yet. I'm writing some stuff on packages at the moment and probably some more stuff after that and I think others are too - so hopefully it will soon be easier to get started with U++.

Graeme

If the authors of U++ spent even a little time on writing a comprehensive tutorial on U++. This would make the developement sluggish . That's why there are other people doing this. Also everyone is welcome to contribute somehow. Even by asking questions on these forums you are already contributing...

On the other hand, to improve and to speed up tutorial writing, I'm experimenting with something... which might be helpful...

So, start programming and ask questions here. The power should come to your hands... .

How about setting up a wiki and letting the community write the docs?

You do not need to be sorry. I had offered wiki on upp.sourceforge.net mailing lists and started doing it. But we decided to launch the forums first. As you can see it's happening..

Also if you are new, you can find other useful information there:

http://sourceforge.net/mailarchive/forum.php?forum_id=36165

Once again, enthusiasm and ideas are most welcome!

Arijus
