I think it would be useful now and in the future - Named Code Highlight schemes. Now, I mean, while we don't have proper handling of namespaces in code editor. I want a separate scheme where Block Level 1 is white (or background)...

A possibility to have 2 or more e.g "ide.colors", "ide1.colors" or in hl_color.i some separate sections to generate from and then an option to switch between saved settings. Like Default, Mirek's

favourite, Daniel's, forNamespaces etc...

Now I'm switching block Level 1 color to white when open files with namespaces and then some other color for files without namespaces...

Is this more clear now?

Yes. Actually, as namespaces go, I plan to have specific support in highlighting that would make them look better (that of course does not mean that above is useless).
