Hello all

Is it possible to set two vertical axis for an Scatter ?

I would like to show some data series with different units with similar scale.

I would like to show some data series with different units with similar scale.

Hello Andrei

I have added to Scatter control this possibility.

This is a screenshot of TestScatter2 with this included:

I have programmed following your programming style and changing the minimum quantity of code possible.

If you like it I can include also the .usc file and a new functions documentation.

Hello Andrei

I have included in previous post an update improving scale behavior and copy to clipboard support.

Hello, Koldo!

I am sorry to respond you late.
The improvements they've made are welcome.
You can upload it to svn repository.
You are the first contributor to Scatter! Congratulations!

Andrei

Incredible Andrei,

I had posted some forum threads about Scatter Ctrl, but without success. My last question was about if you have any updates and if is if possible to develop it.

Nice job you made!

Best regards, Ion Lupascu (tojocky).

Latest version of Scatter is one of the svn repository.

Of course, Scatter control can be developed. Any proposal in this regard or any concrete contribution is to the benefit of users.

Andrei

Hello all

Scatter now lets to zoom and scroll graphs with the mouse.

It is possible to select this feature for X, Y or both axis.

To avoid any disturbance with previous versions it is disabled by default.

It is a nice feature. You will like it.

In addition package texts have been internationalized.
