Hello!

I'm new to U++ development; I admit this is a great tool, but I have a problem: compiling the BlueBar example, with either Windows SDK (for Vista - MSC8, or Win7 - MSC9) or MinGW (gcc 3.4.5 or 4.4.0) goes fine; running the program gives crash when clicking any of the toolbar's buttons (list, superscript, etc). The debugger finds the error in Callback.cpp which is:

```
#include "Core.h"

NAMESPACE_UPP

##BLITZ_APPROVE
#define CPP_PART__
#include "Cbgen.h"

void Callback::Execute() const
{
    if(action) action->Execute();
}

bool Gate::Execute() const
{
    return (void *)action == (void *)1 ? true : action ? action->Execute() : false;
}

END_UPP_NAMESPACE
```

What is the problem? The source code is unmodified. U++ version 1952. I'd like to know how to solve this, i need it for a project.

Vlad

Sorry, it is just a bug in the example.

Replace UWord constructor with this one:

```
UWord::UWord()
{
```

```
AddFrame(menuBar);
AddFrame(TopSeparatorFrame());
AddFrame(toolbar);
AddFrame(statusbar);
Add(editor.SizePos());
menuBar.Set(THISBACK(MainMenu));
Sizeable().Zoomable();
WhenClose = THISBACK(Destroy);
menuBar.WhenHelp = toolbar.WhenHelp = statusbar;
static int doc;
Title(Format("Document%d", ++doc));
Icon(CtrlImg::File());
editor.ClearModify();
SetBar();
editor.WhenRefreshBar = THISBACK(SetBar);
OpenMain();
ActiveFocus(editor);
}
```

(one line deleted) and it should work.

(The fix is committed to svn too).

Mirek

Same modification must be in UWord-example and in other places.

It should have been fixed everywhere else some time ago. BlueBar was the last one I hope...

Maybe, I use old modified version of UWord, sorry.

Thank you!

Although my post went on the wrong forum's section, you were very kind to answer.
