Subject: How to make Label/StaticText label word wrapped?

Used forum search but failed to find the answer. Using QTF didn't help because it requires placing line-breaks (&) explicitly. But I need label to be word-wrapped automatically depending ot it's size. Who succeeded in adding word wrap to Label text, please help.

Actually, I have just checked - it looks like Qtf works quite fine, just not in Layout designer...

Correct me, but I think if the text in StaticText start with \1, then it starts to work like QTF

Sergey, you're right, of course.

Mirek, it looks like QTF text label is really word-wrapped. But I couldn't find a way to make it vertically aligned like ordinary text (top vertical alignment). QTF label is placed in the vertical middle of control, but that is not what I wanted. Is there a way to make it top-aligned like ardinary text?

SetVAlign(ALIGN_TOP);

But I guess we are due to some layout editor (to fix QTF displaying) and .usc update...
