Subject: Windows 7 - long wait after app crash

Well, well, well... I finally had to do that, spent the whole Friday upgrading my desktop to Windows 7 - I have found U++ (and therefore my apps) slowly diverging from this soon to be mainstream look&feel.

Now I almost as happy as with XP, but there are some glitches to sort out.

One of them is that after the crash of application being developed, I have to wait a long long time before Win7 finally removes it. I guess it is trying to gather informations about crash so that it can send it to Microsoft or developer or whatever.

Is there a way how to disable it and make crash "fast"? (just tell me that it crashed, that is all I need).

Mirek

4. You can click on disable error reporting entirely, or for certain programs.
