
Subject: How to know if I am drawing on screen?

Hi,

I'd like to know the best way to get information, whether my draw object will draw on screen or on an image, for example.

I saw somewhere such code:

```
func(Draw& w)
{
    if(w.IsGui())
        ... // We are on screen
    else
        ... // other cases
}
```

But after looking deeper, IsGui() is true on Windows with GDI, but is false under X11 (See implementation of SystemDraw::GetInfo()).

So I suspect this is not the right way... What is better ?

Thanks
Lionel

I don't think there is a specific way to do this. The idea is that you shouldn't care.

Maybe you could do:

```
if (dynamic_cast<SystemDraw>(&w)) {
    // Drawing to screen
}
else {
    // Drawing to some kind of buffer
}
```

Maybe you could do:

```
if (dynamic_cast<SystemDraw>(&w)) {  
    // Drawing to screen  
}  
else {  
    // Drawing to some kind of buffer  
}
```

Thanks, good idea. I used `dynamic_cast<SystemDraw*>(&w)`.

I agree that I should not care but in fact, this is not my code. I am trying to get antialiasing to work correctly for the Scatter control from Bazaar.

regards,
Lionel
