I found a strange bug, reproducible with following code, which appears just on windows platform :

BigIcons.iml:

```

main.cpp :

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```

#define IMAGECLASS BiglconsImg
#define IMAGEFILE <Biglcons/Biglcons.iml>
#include <Draw/iml.h>

Vector<Image> &v(void)
{
    static Vector<Image>vv;
    return vv;
}
INITBLOCK
{
    v().Add(BiglconsImg::Flag());
};

class Biglcons : public TopWindow
{
public:
    typedef Biglcons CLASSNAME;

    ToolBar toolBar;

    void nullFunc(void) {}

    Biglcons()
    {
        toolBar.Add("one", BiglconsImg::Flag(), THISBACK(nullFunc));
        AddFrame(toolBar);
    }
};

GUI_APP_MAIN
{
    Biglcons().Run();
}

```

Passing mouse cursor over toolbar makes icon vanish and not reappear anymore. On Linux is all ok.

Removing the INITBLOCK part, the correct behaviour is restored.

The testcase (on which obviously the INITBLOCK is useless...) is taken from an application that needs to register some icons at program startup.

Ciao

Even simpler testcase (same image file as above...) :

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

#define IMAGECLASS BiglconsImg
#define IMAGEFILE <Biglcons/Biglcons.iml>
#include <Draw/iml.h>

INITBLOCK
{
    Image img = BiglconsImg::Flag();
};

class Biglcons : public TopWindow
{
public:
    typedef Biglcons CLASSNAME;
    ToolBar toolBar;
    void nullFunc(void) {}
    Biglcons()
    {
        toolBar.Add("one", BiglconsImg::Flag(), THISBACK(nullFunc));
        AddFrame(toolBar);
    }
};

GUI_APP_MAIN
{
    Biglcons().Run();
}
```

It seems that accessing Iml from inside INITBLOCK can bring troubles....

Definitely!

There is basic rule: No graphics in INITBLOCKs. Only Core stuff.

Yep, I solved it storing the string name of image instead of the image itself; the image can be then fetched with GetImlImage() function.
Had to change some stuff in PolyXML ClassFactory, indeed.
