
Subject: Question about Threads

Hello upp Team,

I am experimenting a bit with Thread programming in upp and encountered an error.
The compiler did not recognize the thread class name.

The example GUIMT runs without errors from which I took most of the code, but my application does not recognize the thread class.

```
class MyClass : public WithMyClassLayout<TopWindow>
{
public:
    typedef MyClass CLASSNAME;
    MyClass();
    void StartPlay();

    //thread handling
    volatile Atomic terminated;
    volatile Atomic threads;
};

typedef struct {
    MyClass *gui;
} PlayInfo;

//thread callback
void WorkerThread(PlayInfo f)
{
    while (true)
    {
        if(f.gui->terminated)
            break;
        //playfile

    }
    AtomicDec(f.gui->threads);
}

//Callback of button
void MyClass::StartPlay()
{
    PlayInfo f;
    f.gui = this;
```

```
AtomicInc(threads);
Thread().Run(callback1(WorkerThread, f)); //error in this line
}
```

Output:

error C2228: Left of ".Run" has to be a class/struct/union
Typ is "unknown-type"
error C3861: "Thread": Identifier was not found.

Thank you for comments and help

    AtomicInc(threads);
    Thread().Run(callback1(WorkerThread, f)); //error in this line
}

```

Output:
error C2228: Left of ".Run" has to be a class/struct/union
Typ is "unknown-type"
error C3861: "Thread": Identifier was not found.

Thank you for comments and help

Hello Reini

I can answer you with a 99,999% of possibilities that the problem comes from you have not included in "Project/Main package configuration" the option MT (multi thread).

Hello Koldo

Thanks for your help ! It worked

But anyway it was way complicated to activate the MT Flag in an already existing project since I did not found a possibility to activate the MT switch if the project already exists.

So I had to do that manually in the upp Project File and then only it worked.

Nice weekend so far

Why was it hard? "Project/Main package configuration" as said above, press Insert or right click and select menu to insert a new configuration, an type MT there. Or if you have already a configuration, you can add it to that.

Recompile is needed.

Yes, it is really very easy.

Just clicking there
