Hello

I wanted to ask you if it is possible to include in a pdf a WMF metafile format drawing.

Now it is possible to draw in a metafile using WinMetaFileDraw and copy it to clipboard using WinMetaFile::WriteClipboard();.

The problem I have is that .pdf size is big as I am copying bitmaps drawn in the application to a Report and converting them to pdf using UPP::Pdf. Probably file size would be smaller if WinMetaFile could be passed to Qtf or, if not possible, to be inserted directly in the Report.
