A few things on key bindings.

Ctrl I is shown in context menu of files list as "add any file to package" but it doesn't appear in the list of non-changeable keys in the list of key bindings you can get to thru "help index". I tried assigning it to "statistics" but it kept its default behaviour.

The setup keys dialog could refuse to allow a key assignment of a key that's already assigned or is unchangeable. This dialog could also be resizeable and remember the last size you set it to - I don't know if any UPP dialogs do this but it's a nice feature.

That reminds me, if you select a particular text size in UPP help, UPP remembers that size next time you open help, but if you close TheIDE and restart, it goes back to default - persistence would be nice.

As always, I don't know what priority anything is - I just make feature requests and comments ...

Graeme
